EXECUTIONLISTS

Lesson 12 Exercise – Create, Link and Run ExecutionLists

Objective

By the end of this exercise, you will create an ExecutionList, link TestCases to that ExecutionList, and run it.

Why is this important?

This is important because the Execution section allows you to prepare and arrange multiple TestCases for execution. Results are logged, so you can check your progress over time. Moreover, you can visualize and export test outcomes.

Key elements:

Execution
Folder

ExecutionList
Folder

ExecutionList

Execution

Execution
Passed

Execution
Failed

Instructions

1. Navigate to the Execution section in Tosca. Create an ExecutionList Folder called "**01 SAP GUI Automation**".
2. Within the Folder you just created, create an ExecutionList called "**Order2Cash**".
3. Link all 5 TestCases to the ExecutionList by linking the "**Order2Cash**" TestCaseFolder to the ExecutionList you just created.
4. Log out of SAP and close your SAP GUI Application. Run the whole ExecutionList. Save your changes.
